Canada's liberal government is advancing plans to roll out a new Covid mRNA "vaccine" to "vaccinate" the general public using aerosols.

The Canadian government is ramping up testing for a disturbing new Covid mRNA "AeroVax."

The new AeroVax seeks to overcome "vaccine hesitancy" by using aerosols to "vaccinate" the general public.

Unlike traditional "vaccines" that are deployed using injections, the new AeroVax is an atomized spray that is inhaled.

The new "vaccines" are sprayed in aerosol form and breathed in by recipients.

The AeroVax was developed by researchers at the Bill and Melinda Gates Foundation-funded McMaster University in Canada.

According to researchers, the Canadian government's Institutes of Health Research (CIHR) has now invested \$8 million in taxpayer funding into the AeroVax project as scientists prepare for the next round of clinical tests.

Enemy of Neuropathy (Stop Doing This)

The scientists developing the experimental “Serova” Covid mRNA “vaccine” insist that it will be administered as a nasal spray.

However, the development of inhaled “vaccines” could allow for large numbers of people to be “vaccinated” at once if the AeroVax were sprayed into the atmosphere.

If the AeroVax were deployed atmospherically, it could “vaccinate” entire towns and cities at once, bypassing individual consent.

Populations could be “vaccinated” without their knowledge under such a scheme.

These concerns have been [previously raised](#) by multiple experts amid the ongoing push to develop inhaled “vaccines.”

“When you put the pieces of the puzzle together, a disturbing picture emerges,” Dr. Joseph Mercola [warned](#) when the technology first emerged in 2023.

Slay News first [reported](#) on the inhaled mRNA “vaccines” in 2023 when it began its Phase 1 trials.

Following an initial study on mice, the results led researchers to declare that this “new method of delivery could radically change the way people are vaccinated.”

The first human trials saw 36 people participate in the experiment.

According to researchers, there were no severe side effects from the Phase 1 trials.

Researchers are now rapidly advancing Phase 2 trials.

They are in active recruitment for 350 volunteers for the randomized, double-blind trials.

A total of 75 percent of the participants will get the real version of the real “vaccine,” while the rest will get placebos.

Two versions of the “inhaled” Covid “vaccines” were developed in 2021.

They were named “Tri:ChAd” and “Tri:HuAd.”

Like the mRNA injections, both AeroVax “vaccines” use some form of the spike protein found in the Covid virus.

Both versions were made with HEK293 fetal cell lines.

“Tri:HuAd was packaged and rescued in HEK293 cells through a two-plasmid co-transfection system,” reads a full abstract of the vaccine.

The HEK293 fetal cell lines were derived from kidney tissue taken from an aborted baby in the Netherlands in the 1970s.

According to McMaster, pre-clinical trials in animals have “already” shown that “the inhaled aerosol vaccine is far more effective at inducing protective immune responses than

traditional injections.”

McMaster claims this is due to an inhaled version of the “vaccine” targeting the upper airways, where respiratory “viruses first enter the body.”

Meanwhile, the U.S. Food and Drug Administration (FDA) has [granted Fast Track Designation](#) for a new self-amplifying “replicon” mRNA “vaccine” to supposedly tackle the H5N1 influenza A virus (bird flu).

The fast track was awarded to Arcturus Therapeutics, a [Bill Gates-funded company](#) specializing in mRNA-based pharmaceuticals, for its ARCT-2304 mRNA “vaccine.”

One of Arcturus Therapeutics’ senior advisors, former CDC and FDA official [Dr. Peter A. Patriarca](#), also advises the Gates Foundation.

As Slay News has previously [reported](#), the “self-amplifying” or “[replicon](#)” mRNA shots contain the equipment needed to make more of itself once it enters cells.

The injections have been dubbed “replicon” vaccines because they are able to replicate inside the human body to produce more mRNA over time.

The new technology has provoked a worldwide [backlash from experts](#) and [concerned citizens](#).

Yet, despite widespread concerns about the new “vaccines,” federal health officials are rushing the development of the new “replicon” injections.
