

**Killing Floor: Firsthand Witness Attests Hospital Deliberately Hastened the Deaths of COVID Patients**

“They [patients] put the phone on speaker; the doctors didn't know it. And they were in there screaming at [the patients], you're going to die if you don't do what we tell you.”

“We incentivized murder,” attested attorney Tom Renz on the [Dr. Drew show](#) Wednesday (5/17/23). “What we did was we created a financial incentive — not if you get better from COVID, you get a bonus. It’s if you die from COVID, you get a bonus.”

[Mr. Renz](#) was invited after releasing an [audio recording](#) between a pharmacist and a nurse discussing excessive morphine administration on a particular hospital floor on his [Twitter feed](#).

Morphine is a potent opioid analgesic, meaning it is primarily used for pain relief. Morphine affects the central nervous system (CNS), which can lead to respiratory depression and then hypoxia (not enough oxygen in the blood). Therefore, if one receives an excessive amount of morphine, it opens the door for more invasive measures like a mechanical ventilator.

**Here's the transcript of that recording:**

PHARMACIST: “I didn’t even ask for this transfer [to this floor]. But because these are the politics, if you complain or stir, they’re going to shut you up and move you out.”

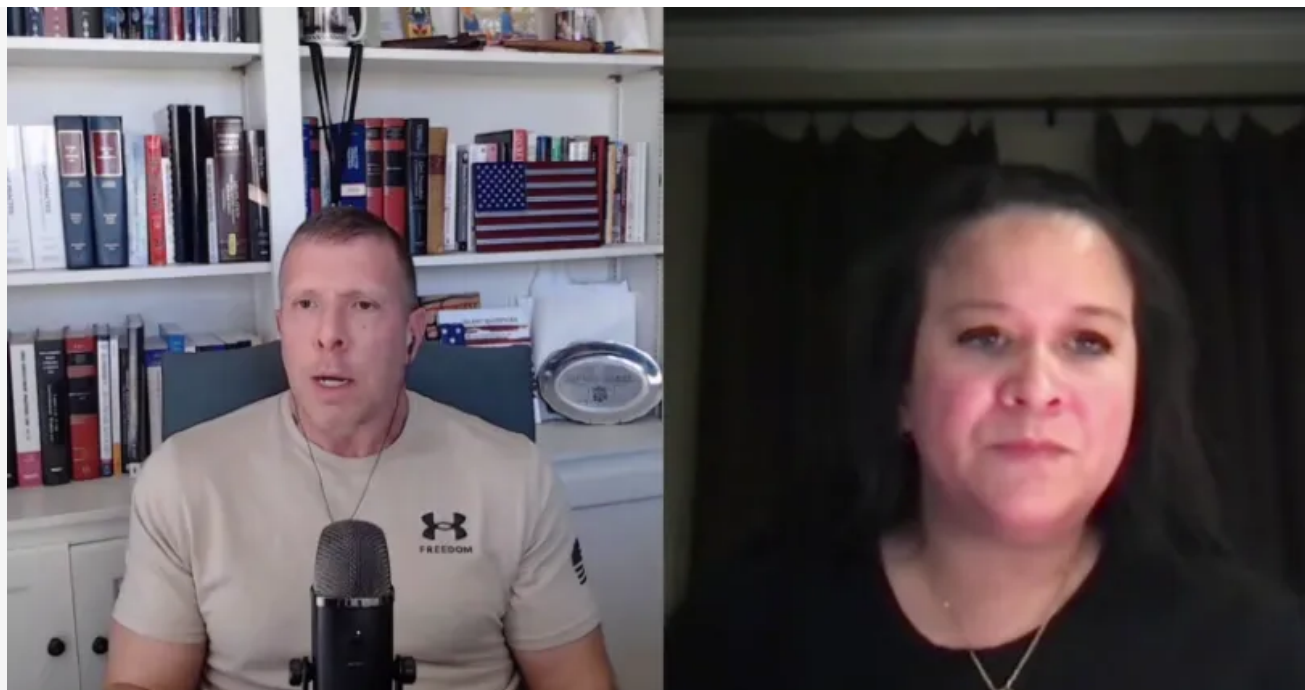

NURSE: “Keisha said, are we hospice care — or what’s the deal? She said that Dr. Steagall says this floor is going to be his patients. So we’re — **we’re killing the patients [on] this floor.** Because what he’s asking us — well, other floors don’t want to do it.”

PHARMACIST: “Yeah, I couldn’t sleep at night. And then when that nurse practitioner — when you got that assignment to do the morphine, and you’re like, she doesn’t need it. And I was just like, this is what I’m talking about.”

NURSE: “They’re okay. They’re comfortable. We can tell when they’re in pain. We can tell when they’re agitated. We can tell when they are whatever. That doesn’t make that you keep giving them medication just to knock them out. Cause, apparently, that’s what you are doing.”

PHARMACIST: “I remember that day, you were like, you got the other nurses to come in and say — and I’m just like, I know. That’s what they’re doing.”

**Adrienne — a clinical pharmacist of 18 years and the whistleblower behind that recorded conversation — revealed more details on what she saw and heard to attorney Tom Renz.**

“How did you know that there were people hastening death?” asked [Attorney Renz](#).

“I know that because I spoke to one of the nurses one morning when I was opening on the floor,” Adrienne answered. “I work on the unit. And he [the nurse] was totally upset because the night nurse ‘didn’t do her job.’ And I questioned him. I said, ‘Why are you so mad? What do you mean she didn’t do her job.’ And he basically said that she **didn’t go up on the morphine drip and take care of business**. Now he has to do it. And he has to take care of it.”

[Attorney Renz](#) unfolded more details to listeners. “My client [Adrienne] asked for a religious accommodation that would basically exempt her from having to deal with blanket orders to murder people. That’s my words, not hers. The hospital ignored her but then said no.”

“Let’s think about that,” he proposed. “Now, we’ve been hearing rumors and all sorts of stuff for quite some time that the hospitals were denying ivermectin, denying hydroxychloroquine, denying early treatment, denying this, denying that. But we now have a firsthand witness who was ignored and ostracized for requesting that hospitals take steps to not hasten death. Or at least that she not be directly required to do that in a blanket way.”

“Folks, I’m going to tell you that it’s my belief that **this was coordinated on a very high level from a lot of places**,” expressed [Mr. Renz](#). “And I think we have some real questions to ask ourselves when we have a doctor of pharmacy with the clinical experience that Adrienne has who’s saying to them, hey, what you’re doing is hastening death — and they basically blow it off. There’s an issue here.”

**Attorney Tom Renz shared with doctors Drew Pinsky and Kelly Victory that he had “probably a thousand people” tell him a similar “horror stories.”**

“I had probably a thousand people that I talked to over time begging me for help, saying the hospital won’t let us make decisions. Do you know how many instances I had of people calling me and telling me that my brother, sister, loved one is in the hospital?” he rhetorically asked.

“They [patients] put the phone on speaker; the doctors didn’t know it. And they were in there screaming at [the patients], you’re going to die, you’re going to die, you’re going to die if you don’t do what we tell you.”

### **Now, why would hospitals do this?**

It seems almost unthinkable that hospitals would deliberately harm patients — at least under normal conditions. But as [Mr. Renz](#) detailed, there were financial incentives that paid hospitals more money for bad outcomes, not good outcomes.

“So if your patient is diagnosed and called a COVID patient, [you get more money]. Then, if your patient goes through certain treatment protocols, remdesivir, ventilator, et cetera, et cetera, each one of those, you’re going to get an additional amount of money,” shared [Mr. Renz](#).

[Dr. Paul Marik](#), one of the world's most published critical care doctors, has testified that hospitals received a [20% bonus](#) on the entire hospital bill from the Federal government just for administering remdesivir to a COVID patient.

[Attorney Renz](#) continued. “Then, on top of that, we throw in this immunity thing. We say, well, and not only do you get a big incentive if the patient dies, but we’re also going to make it so that you can’t be sued for killing them even if it looks like you did. You have to actually show willfulness — [a] willfulness kind of intent. It has to be intentional.”

“So they made the bar so high that it’s nearly impossible,” he lamented. “And you throw in the [financial incentive] — **we incentivized murder**, to my mind.”

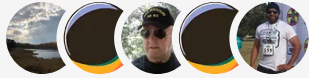

---

If you or a loved one experienced a similar situation, please leave a comment and share this post. A few anecdotes are one thing, but when hundreds or thousands of people

share the same story, that is no longer anecdotal evidence — that is a troubling signal for atrocities against humanity.

My husband was murdered in the hospital after being given REMDESEVIR against our wishes! He was past the point that he should have been given REMDESEVIR and we were denied when we asked for Ivermectin and HCQ just like so many others! My husband was a Navy veteran, a great husband, father and grandpa and died at age 50!!!! All for greed!!!

When, let's call it "nepotism" is a criteria for success in any endeavor of great import, then it befalls the community to reject this. Isn't it why courts are disinterested, and attorneys are captured, and doctors only prescribe and control, and bankers say it's okay, "immune".

We are so sorry for your loss and what you went through. They tried this with my husband when he was suffering from something else, but supposedly got covid from another hospital we were at previous to this one. They tried to give him Remdesivir and he said he would get up and walk out. He was released shortly thereafter when they realized he wasn't going to give them their killing bonus. No instructions....nothing. We are in dangerous times.

A distant family member of mine also escaped the ICU... he pulled out his ventilator tubing before they could sedate him more . He said one of the nurses was kind enough to tell him that everyone who came into that ICU was dying . My relative was in his 20 s... she hinted to him to leave . At night this relative pulled out his tubing and paid the janitor to assist him to escape . This was in March 2020. He felt it was evil what was going on.

♡ LIKE (66) 💬 REPLY (1) ...

**Joni** May 19

OMG! No one in their twenties ever should have been ventilated. Thank God she had a conscience. We have a friend that lost three family members the same way. I helped

another friend save his x-wife. The doctor screamed at him and said "she's going to die anyway so you might as well put her on the ventilator.!!!" They moved her to a nursing home because she was too weak and they had already given her Remdesivir against her wishes and she told them to take her off of it. Then they found out that they discovered she had cancer but never bothered to treat it. She eventually went to another hospital where a doctor he knew from church organized a team that help her recover as best as possible. Unfortunately she just passed away from the cancer. It had progressed to far. These doctors and complicit nurses all need fully prosecuted for what they have done.

No doubt it was the hospital even though Fraudci also preached it. It was a planned kill and they were paid dearly to follow through. Had they read a fraction of what those of us who don't trust these powers that be, they would have NEVER followed it had they truly cared about doing NO harm. The covid kill \$\$ they were promised carried it through. They were no more innocent than hit men paid to kill people.

When I tried to tell people that it seemed like this was going on, I was told that "That can't be true. Doctors wouldn't do that. I'm sure their doing what they think is best for the patients regardless of how it seems."

The level of evil that exists in trusted positions is staggering when you finally see it.

♡ LIKE (44) 💬 REPLY (4) ...

**Soul On A Journey** May 19

I felt exactly the same way... saying that something is wrong ... I felt something very evil from day 1. Why was outpatient treatment forbidden . Why was the Keyya not shouting out zinc , vitamin C , even Zithromax for heavens sake ... as we know it has some antiviral effects. I could not

understand why patents had to wait 2 weeks before being offered treatment ... this goes against everything we know about treatments for viral... you do something about it at symptom onset ... treat a low flame , why wait for the full fire !! The hospital protocols felt " possessed " .... why no zinc , no vitamin D , why no steroids allowed ... steroids only allowed after June 2020. Once steroids were included on the protocols less people went on ventilators. I felt doc's weren't trying things that work , why were they tied to set protocols that did not seem to work. My friends and family kept saying that everyone was trying their best but those explanations did not sit well with me . I knew we were being lied to and there was evil .

♡ LIKE (30) 💬 REPLY (2) ...

**Dorothy Ann** Writes Dorothy's Substack May 19

There is a very long history in the Rockefeller trained medical "unprofessionals" to be yes men. Not to question. I believe there have been good treatments for cancer that was suppressed since big pharma would lose money on the poison and cut death cancer protocol that has been established. I also believe we have been slowly poisoning ourselves through their vaccines, processed crap food, fluoridated water etc.

You got to understand things that what is good for us has been suppressed, or if they could not suppress it, then they would allow micro doses of it. For example people are only now realizing the value of vitamin D. The FDA recommends about a fifth dosage of vitamin D than they should. Kind of like if your are in a desert dying of dehydration and someone sees you and says I got water for you. You gladly accept their water offer and they give you three teaspoons of water. You tell them you need more water, that was not enough, and they say I gave you three teaspoons. I'm not giving you more. People complained they gave adults badly ill with covid pediatric dosages of steroids. They continually gave small doses of good medicine on purpose so it was useless anyway.

Then we get taught toxic fluoride is good for our teeth. Fluoride is extremely toxic. Why is it in our water, toothpaste, mouthwash? By the way all vaccines have something toxic in them, called adjuvant, to act as a "preservative" or it will just pass through a healthy body, unless of course too many people are having ill effects from the vaccine and they made some saline shots.

So with the current medical system, a lot of times they suppress healthy ways to get better, or give small useless doses of it, or outright poison people. This is genocide. This has been genocide for some time now. Stop asking the people trying to kill you to stop trying to kill you. They know they are trying to kill you, and have no intention of stopping till you are dead.

I too sensed every medical approach was misguided, and given the entirety of poor recommendations, suspected they were intentional and evil. Still, everyone around me dismissed me ( despite my professional training) as having become seduced by conspiracy theorists. Even a friend who lost her husband after the 2nd booster continues to deny that

theorists. Even a friend who lost her husband after the 2nd booster continues to deny that people can have been so intentionally evil. Why is it some of us were able to see things so clearly and others, even after facing personal tragedies, continue to make excuses and remain unable to see what is going on?

♡ LIKE (25) 💬 REPLY (3) ...

**Mig** May 20

Because our training for birth tells us most people are good. Doctors are even better. And nurses? They are like angels: they work for almost no money, so that is pure love for mankind.

Because everybody told us from birth nobody causes harm to others on a large scale because that is not going to possible to get away with. Everybody would notice and find the causer.

We were told that are systems of politicians and judges works perfectly. In case of politicians, you can even vote the non functional away!

Judges are independent and honest so they can be employed right away for life.

When writing this down, the thought enters my mind that when really thinking THIS I WROTE ABOVE, wouldn't that actually be some kind of GARANTEE one day they bad people can very easily start doing wathever they like to us people when we in general have ideas of our leaders/doctors/nurses/lots of other people, that doesn't even come close to reality?

♡ LIKE (5) 💬 REPLY (2) ⋮

I spent 2 months in the hospital for covid, from mid-December 2021 to early February 2022. I was 49,

unvaccinated, and admittedly pretty overweight. I did not want to go to the hospital, but we couldn't find monoclonal antibodies or oxygen on a Saturday. My husband, his mom, and our family doctor all urged I go. I agreed to Remdesivir in the ER only because the doctor told me they would monitor by kidneys and liver closely (I told him I knew it failed ebola trials) and that I could stop it at any time. To the hospital's credit, they actually complied when I refused any more after the second day. What I did not know then was that the only possible time Remdesivir can help is during viral replication. I was well past that point at eight days into the infection. I asked for Ivermectin. The doctor told me it didn't work (I knew this was a lie).

On my sixth night in the hospital (after the doctor told me I was doing well and only needed more time), they woke me from sleeping and told me that since my oxygen saturation wasn't staying above 89%, they needed to switch me from the high flow nasal cannula to a bipap. (Oxygen saturation normally drops while sleeping.) After only 10 or 15 minutes, they declared I had failed the bipap and must be ventilated. I told them I wanted to talk to my husband first. (I hadn't seen him since they admitted me into the hospital.) I had NEVER once through all of this had physical difficulty breathing, only keeping my oxygen saturation up. I told them I didn't want to be ventilated, that I knew the statistics that 80-90% of those ventilated die. The doctor told me that in that hospital, it was more like 50-50%. I didn't see that as much of an improvement.

My husband is a heavy sleeper, and didn't hear the phone until around 5 am. I told him I loved him, and asked him to tell our 10-yo son and 14-yo daughter that I loved them. We didn't get to talk very long, and I didn't get to talk to the kids at all. I was sure I was going to die and was the most frightened I've ever been, even though I knew where I was going when I died. A nurse told me I could squeeze her

I believe monoclonal treatments were deliberately denied Covid sufferers in time. My brother had to call all over to find a treatment in September 2021 . It was shut down soon after. Biden had bought millions of doses and then shut off use of them. He is outright guilty of h0m1c1de along with Trump.

♡ LIKE (5) 💬 REPLY (1) ...

**Michelle** 22 hr ago

I asked the doctor about monoclonal antibodies at the same time I asked about ivermectin, and he seemed to imply I wouldn't have been eligible for them. I hope justice is served in my lifetime for all those who participated in this evil, but if not, I know God will serve justice in the end.

I am not able to say a lot but I am a medical practitioner and the husband of one of my patients was admitted to ED with COvid - he walked to the ambulance, responded to oxyigen, but on arrival to hospital was not trialled on oxygen but immediately sedated against his will, ventilated, administered remdesevir without his wife's knowledge or permission. ALL requests fro Vit D. zinc, Iv Vit C, ivermectin etc were denied and ignored. We were told he only had 2 days to live due to secondary ventilator-induced lung damage, so we instigated an immediate court action; opposed by the top government solicitor although it was a private hospital- although he was out of Covid, we were told that they would only follow Covid protocol. I pushed for NAC ( as he had self administered paracetamol high/toxic dose and his LFTs has gone off; finally they agreed to this, he rallied; we then pushed for reducing ventilator and weaning; he was off in 5 days and out of hospital another couple of weeks. He is now doing lung rehab and progressing very well. All the damage was nosocomial, not Covid. By the way, if anyone takes paracetamol, please don't - it depletes your NAC and hence glutathione and adds to liver stress, oxidative stress, immune dysfunction

stress, oxidative stress, immune dysfunction.

**Soul On A Journey** May 19

The ventilators were used to drive up the death rates so that mainstream needs could stir more fear , more fear and more fear so that eventually they would beg for a vaccine. Those hospital protocols were terrible and more terrifying was that doctors were not allowed to use their own judgment to save lives or were scared to talk out openly about saving a life . It was so disgusting how the initial guidance was just to take Tylenol and stay home for 2 weeks.... that made me suspicious as to why no anti inflammatory was allowed when the virus was causing cytokine storm. Truly dark times . God bless you for being a conscientious and ethical practitioner. Be happy.

Incentives matter!

<https://simulationcommander.substack.com/p/when-incentives-go-wrong-61b>

Healthcare is not a one-size-fits-all industry. Free individuals should be able to make their own decisions about what type of end-of-life care they want, if they even want any at all. (Personally, I'd rather my cash went to my family rather than the healthcare industry, but I'm a strange bean.) But when government gets involved, the central planners are going to centrally plan. That means reducing your life, or the life of a loved one, to a figure on an Excel spreadsheet.

Maybe they don't call these people "death panels", (in wokespeak they would obviously be Transcendence & Resurrection Assistance Professionals) but in the end the result is the same: medical officials attempting to lead you to medical procedures that will lead to your death.

**Jocelyn Stamat, MD** May 20

As a licensed physician I sat with a family member for 2 months and fended off terrible care. So many atrocious decisions and abuses that almost killed him left me no choice but to think it was all intentional. He was legally "Do Not Intubate" and I was his medical surrogate, at bedside, and still they intubated him multiple times unnecessarily. When his gallbladder ruptured, in the hospital and under their care, they ignored him for 5 days while he sat marinating in his own digestive acids, until he became septic and his kidneys failed, after which they finally operated to remove his gallbladder, but not soon enough as he then required kidney dialysis for weeks. They kept him in 4 point restraints unnecessarily and against protocol and sedated him so heavily he could barely breathe spontaneously. They prevented us multiple times from transferring him to accepting hospitals nearer to his young children who hadn't seen him in months. I had an acquaintance at one hospital reveal that after all paperwork from all parties had been approved, his attending physician had secretly reneged the transfer. This is when it became clear to me that he was being held hostage and we would need to escape if we ever hoped to leave. After weeks of trying to help him escape, it was only with the help of a nurse and a professional extraction team with private jet on stand-by that I was able to get him out of there. Despite their best efforts, he is now home and fully recovered. This experience changed me forever as a person and as a physician.

LIKE (22) REPLY (5) ...

**Janet** May 20

Even having a physician at his side didn't prevent their attempts to murder and extract money from his suffering and cause life changing stress to the family. That is one scary story. Glad he's recovered. Bless you, doctor. Along with you there were angels of protection on duty.

Thank God for you he's still alive, and still with your advocacy and being a Dr they did those things. I would like to say unbelievable, but we all know it's not anymore. I cared for my mother over the last 10 years of her life here at home, and fortunately everyone in her medical circle knew I was always going to be by her side as an advocate. She got Pneumonia in August before the jab was released but they never made the diagnosis for covid, though some in the ER seemed to have wanted it to be positive by the surprise when it came back negative. I don't think our hospital in St. Cloud MN ever got that bad, though we had one Tom Renz came her to fight for Scott Quiner from Mercy Hospital (how ironic of a name) who still ended up dying after they finally got him transferred out. Scary thing is it will continue and get worse if the WHO agenda gets through.

"On Saturday morning, Stew Peters announced on his Telegram channel that Scott Quiner, whose story we have been following as his wife, Anne, fought against a hospital wanting to allow him to die, has passed away."

"Renz was able to get Scott moved to a hospital in Texas, who Anne had spoken with before and who would give Scott proper treatment".

"Once there, the doctors said that Scott was the most undernourished patient they had ever seen. This is consistent with Anne's account of Mercy doctors refusing to give him proper vitamins to help fight the virus. His other organs were working properly, but his lungs were still having major issues."

"Those doctors were able to get Scott to the point of consciousness again. But, sadly, there had been too much injury to Scott from his mistreatment at Mercy. One doctor there, Dr. Linda Soucie, "vaccine shamed" Anne on the phone, telling her that Scott was in the condition he was in because he hadn't received a Covid shot. This, combined with other statements and the hospital's refusal to grant Scott the right to try other medicines, or to let Anne sign an Against Medical Advice form allowing her to bring Scott elsewhere (until Renz got involved), points to discriminatory practices by Mercy Hospital, mistreating Scott because of his "vaccination status."

Our son had a melanoma removed from his back after years of using sunscreen and avoiding the sun. After a few months he started getting lumps in his armpits. Covid lock downs were present. The doctor who would finally see him said the lumps were no problem. It was concerning to our Tom.

Then he calls us enroute to UCSF hospital with "brain cancer". He had had some covid shots by then.

'Emergency overnight surgery by this world renowned team' but not before they "catches up on all the covid boosters". No boosters, no surgery!

They fed him this hype that his team had all the answers. We begged him to get off all sugar and do fasting. He said "the team" had a complete plan.

After a few months the initial stuff wasn't working and he wasn't sure what the next strategy was.

In 8 months he was dead! He had taken the job to be able to work as a financial adviser to elderly

people. He loved them.

Two things happened at a local hospital when my husband had a stroke months after he had a covid variant, he never got the vax thank God.

first odd situation was in an elevator going to visit my husband a doctor coordinator of my husband

treatment asked me if I wanted to hold back treatment if he was going to not make it. I was surprised he would ask me a question like that in an elevator and that he expected an answer!

I said I couldn't answer that because that situation was not happening at the moment and then I told him that it was supposed to be a legal document that needed to be signed and not in an elevator.

The second thing was an ICU NURSE in charge of my husband in ICU told me most of the doctors left the hospital after so many covid deaths happened there and after 30 years she was leaving to because she was doing triple time to make up for lack of doctors.

She told her entire family NEVER GO TO A HOSPITAL UNLESS YOU WANT TO DIE BECAUSE THEY WILL KILL YOU THERE.

My husband was out of that hospital after 3 nights. I, my son and his fiancé were in the room with him all day even after visiting hours.

This is the only stroke hospital in my area. One more incident. The doctor who saved my husband left the profession entirely and no one will tell us why. Odd. Don't you think?

 LIKE (13)  REPLY (1) ...

**Unapologetically Me** Writes Just Another Canadian Dissident. May 20

In 1984, my local hospital killed my 57 year old father. I still have his medical file in a safe.

"NEVER GO TO A HOSPITAL UNLESS YOU WANT TO DIE BECAUSE THEY WILL KILL YOU THERE."

A nurse told me, at the time when he was alive, after coding twice, that she would never allow a relative to be "treated" in that hospital...

2 weeks later, my father was dead.

I "opted out" of the Canadian Medical system in 1984, and thus began my research and self-education which continues to this day.

This is my mother's story.

First I want to thank Dr. Ardis for providing the information on the NIH site's that Ivermectin is an approved treatment for covid19 (as well as for any flu or cold) and his directive to physicians regarding Covid19 treatments that says not to ventilate or use Remdesivir. Everyone should carry a copy with them.

In mid 2021, I was watching Dr. Ardis's interview with Laura Lynn (Live with Laura Lynn) about the NIH approval to use Ivermectin for covid19 treatment and that many doctors and patients don't know about this approval. For some reason, I copied and printed the info on NIH's page. I thank God that I did because that is what saved my mother's life.

My mother is 89 years old (now, 90 years old as of March 2023). She has no health problems, takes no medication, walks 45 minutes almost every day, drives a car, and still plays golf. She has never taken any flu shot and will never take the covid vax. Her favorite motto is "I don't doctor".

In mid-October of 2021, she was feeling weak and tired and didn't feel like eating. This lasted for 10 days until she was taken by a family member to the ER.

At the ER she waited several hours to be seen. She was put on an IV and was waiting to do tests. The hospital wanted her to do a pcr test (since she wasn't covid-vaxxed) and she said no. Yet, the following day she did because my sister wasn't allowed in her room if she didn't take the test. Of course the result was positive (who knows if she just had a cold or the flu, because there is NO diagnostic test for "Covid").

So now the doctor wanted to give her Remdesivir and put her on a ventilator (she was currently on oxygen). I live abroad and talked with family and gave them the info on NIH that Dr. Ardis talked about and told them to give it to the doctor and tell him we didn't want my mom taking Remdisiver or being

the last link, under Limitations/Interpretations mostly says that "IVM did not shorten time to sustained recovery or reduce incidence of hospitalization or death." One, "trial" even says that "there was no evidence that IVM provided any clinical benefit." That's the NIH for you - lying and manipulating trials

♡ LIKE (1) 💬 REPLY (1) ⋮

**KellyG** 12 hr ago

I felt it was good to post the link, but you have to remember that the PCR tests being used to diagnose Covid were also flawed, and the outcomes for the outpatients may not have shown anything because there was nothing to start with beyond a normal flu they stopped diagnosing too.

The limitations above most of the interpretations factor in too. It makes it sound like it had no affect though, I agree.

It isn't hard to believe that they were actually killing people when they deny lifesaving care because a person isn't vaccinated even now when the "pandemic" is over.

This was the biggest scam in history and that tells us something. This wasn't the first time they have done this sort of thing, they have been doing it for a long time to get it dialed in so well. Let's face it, the government fucks up everything and they nearly pulled this off. If it hadn't been for the used car sales pitch to get the vaccine it would have likely gone off without a hitch.

I sort of did that in order to be with my mum when she was ambulated to emerg in 2021, while I was at work. (Atrial fib episode.)

I had on my "uniform" from the non-profit facility which is affiliated with the hospital, a badge, and was wearing a fob on a lanyard.

No one looked at me TWICE when I breezed in.

I had a good look around at the (full) Emerg department cubicles; elderly patients, all alone, untended, moaning or asleep or knocked out.

Some were sitting in hallways, slumped over in wheelchairs...

It was a horrific time to be trapped in a hospital or LTC, without access to a FAMILY ADVOCATE.

Hours after she was treated (Cardioversion) an attending physician finally came to sign her release papers. He was flipping through mum's chart and inquired whether she'd be returning to her long term care facility. (Named it.)

I told him she lives in her own home, so, actually, no?

He continued to flip pages. Asked me her name. I told him. He exclaimed "dammit!" and went to find my mother's correct chart. (Who knows which unfortunate victim had my mother's chart, and vice versa?)

It's a bloody horror show here in B.C.

My nephew was murdered with Remdisivir. He was denied ivermectin, because they said he was not eligible. They gave it to his wife, and her son, who has cerebral palsy, Because they said she is the caregiver. He worked from home! He was also a caregiver. He was 38 years old at the time! Very healthy, maybe a little overweight... and that is why they said he was not a candidate for ivermectin! He didn't meet the criteria! They sent him home, he got worse, took him to another hospital... where they insisted rimdesivir was the only option for him. Within a week he was put on a ventilator. He was then sent to one of our major hospitals to be put on this special machine, I can't think of the name of it, it was for his lungs.... And he died of heart failure! But, of course, "Covid" is on his death certificate

My heart is broken. He was a hard working, loving, just all-around great guy.

A department of HHS, Fauci was in the same huge department, headed by a gal named Seema Verma ran it from 2017-2021. Trump appointee. Hmm article titled, To Stop The Pandemic, Seema Verma Is 'Getting Rid Of A Lot Of Regulations' Graduate of John Hopkins, who sponsored event 201

Remember thinking incentivize huh at the time. Now it's like, wait a minute! What other situations have been pushed this way? Oh by the way this seems the first time some one actually answered a question, thanks for that.

♡ LIKE (5) 💬 REPLY (1) ⋮

**frankly** Writes frankly's Newsletter 24 hr ago

Can't seem to edit anymore. 2 things. Seema and Tony were both in HHS, separate departments. Second, event 201 was sponsored by John Hopkins and the Bill and Malinda Gates foundation. Both have moved on from HHS.

My original post on the origins of incentivizing guessed there might have been a connection to event 201. This money to hospitals is nowhere near the ideals of informed consent.

Even the most cursory cost benefit analysis of US health care, sets off all the alarms. Like our military, the more we spend the less we get. But it doesn't stop there, they actually produce the opposite of their lofty, advertised, objectives.

In some objective court, perhaps only theoretically possible at this juncture, it needs to be proven that all the actions of the HHS and co-defendants actually saved anyone. This before any more public money goes into the Hodge podge of "life savers" to dictate to their future victims.

Did the article even touch on how the incentives may have driven statistics? All the PCR games that drove their narrative.

My friend was in the hospital with Covid, and he also had a lung disease from the military. He was discharged from the Covid unit and put into a regular hospital room. He died there and there was no Covid protocols being used. The death certificate said he died of Covid, which denies the wife and a VA benefits. Under protest, the corner made the hospital change the death certificate, saying that he died due to military. During that same week they had to change the death certificate. There was also a national decision to hospital were paid if Covid was listed first or second cause. At the same time, the VA had changed as well saying the VA benefits would be eligible if it was first or second cause on military.

The CDC ordered the death certificates procedure changed to put Covid first without any of the legally required public notification nor any of the other legally required permissions. They are an evil rogue operation now. Peddling death and greed.

♡ LIKE (5)    💬 REPLY (1)    ⋮

**Troy** May 20

In this case the hospital and doctor had to put Covid as secondary cause of death. What they changed the same week was the hospital would get paid even if Covid was listed secondary. But a main point is, he did not have Covid at all when he died. All hospital staff and family would enter and leave without any protective protocols. Because of the economics involved, it qualifies as a crime of fraud.

My father was given ativan to "calm him down" (he told my mom he wanted out of the hospital because he knew they were death factories). Well ativan is contra-indicated for those with COPD (which my father had). This caused his O2 levels to drop. Well the ventilator was put on next and that was the beginning of the end. When I asked the doctor what the outcomes were of people who were put on the ventilator he said about 5% survived. Mind you prior to this the hospital denied my dad ivermectin, hydroxychloroquine, and wanted to administer remdesivir which we adamantly opposed. If

we don't collectively get justice for all of our loved ones who were murdered for money this will happen again.

The cancer of allopathy is finally being revealed for what it truly is, after a century-long run.

Those of us who have practiced holistic, herbal medicine for many years have always known this. This is why we turned our backs on it long ago. Now, the rest of the world is seeing through the veil, past the lies and the deception.....finally.

It is a cult, demanding allegiance....demanding obedience....demanding worship. Put on your slave mask and signal your loyalty before entering the temple. Do not question the order of the high priests. Take the poison willingly; you are happy to sacrifice yourself to prove your devotion by your willing martyrdom. Accept the mantle of "patient"; you are a powerless victim, grateful to your victimizers for

their tyranny that keeps you "safe".

And now, the walls are crumbling and the stone gods of pharma...always made of sand....are blowing away in the harsh wind.....hallelujah

You um... Watched a Mainstream Media "deconstruction" of the "anti-vaxxers" or the "Covid Denialists" lately? -- and that's just "medicine."

And 98% of humanity still swallows that mixture of raw sewage and toxic waste whole.

♡ LIKE (1) 💬 REPLY (1) ...

**Kay Allen** Writes Kay's Newsletter 6 hr ago

Nope, don't watch mainstream anything....hypnosis is in everything, and it's too tiring to deal with. It's also, imo, feeding energy into the cult, which enables it to continue limping along holding people in thrall. I don't really think it's as bad as 98%, although certainly it is the majority.....but those who have transcended the naradygm continue to raise their levels of consciousness, and that has the gradual effect of bringing up the collective as a whole. I remain the eternal optimist, I suppose.

**James Mangano** Writes Common Sense Thinking / Thought... 23 hr ago · edited 21 hr ago

One of my co-workers got sick suddenly. He went to the hospital, and they confirmed that it was Covid and sent him home. And said if it gets more severe, come back. It got worse in the night, so he returned the next day. They sedated him and then put him on a ventilator. They locked him up like a prisoner of war and didn't let his family in to see him.

The Doctors and nurses wouldn't take him off the vent until he died. Another real-life story that will never be forgotten. Just like in Nazi Germany, they had killing centers to exterminate innocent Jewish people and others, men, women, youth, and precious babies.

Our hospitals were turned into the same thing throughout the whole pandemic event. Almost everything they did in direct obedience to our Government's protocols was intended to kill, not heal.

These are very harsh words that I'm speaking here to everyone. But this is the truth, with tears in my eyes, I say all these things to you.

My father in Sunrise assisted living in Reston VA had a "positive" COVID test but no symptoms. 1 week later had a high heart rate and Sunrise sent him to Reston hospital and said he was COVID positive. He was stable and I was told he would soon be discharged but they continued to delay his release. After 1 week in hospital he started to get pneumonia. Doc called and told me they recommend the vent. I said

no way, and to my surprise doc told me she agreed because she thought he would eventually die if put on vent. Also told them no way to Remdesivir. They claimed they did not have Ivermectin or hydroxychloroquine. After a two day battle, was able to get him on IV vitamin C for 3 days and he fully recovered and was released. Asked staff later what they thought of vit C and they were unimpressed.

My 47 year old husband was murdered in our local hospital after just being there 6 days. Our doctor had given him Ivermectin, breathing treatments & did chest X-rays & other tests in the ER. Our doctor said his lungs needed just a little help so he admitted him so he could get oxygen. This was a Tuesday afternoon. When we FaceTimed him that night, he looked better & his breathing was better. What no one told us was that as soon as he was admitted, they changed his doctor & our doctor's protocols were not going to be followed. On Wednesday he was left in his room and he wasn't given breathing treatments, he wasn't given the second dose of the Ivermectin & he told me some women doctor said she was trying something different. I asked him what it was & he said "I don't know. It was some orange vitamin cocktail that she attached to my IV". Till this day, I still don't know what it was. What does Remdesevir look like? We (my two youngest daughters & myself) were not allowed to be with him because we all were sick with Covid so we had to quarantine & isolate at home. By Wednesday afternoon my husband's breathing was a whole lot worse. I called my doctors office to see what was being done & that's when our doctor found out my husband wasn't his patient & his protocols were not being followed. Our doctor argued with the other doctor for my husband but the damage had been done. Thursday he was worse. I spoke to him that night to say goodnight & check on him around 11 pm. He sounded out of breath but was ok. @ 4:13 am he calls me & says the doctor wants to put him on a ventilator. I'm asking him questions, trying to figure out what's happening & I can hear a struggle going on & then the so called "doctor" gets on the phone & tells me he won't survive another hour unless they put him on the ventilator. That was the last time I spoke with my Love. The "doctor" put him on the ventilator & he died the following Monday. I still don't understand what happened. And the phone call I received from her to tell me he had passed is a whole other story. I want justice for my Johnathon. I want someone's head for the pain & suffering he went through & what me & our girls are still going through.

♡ LIKE 💬 REPLY ...

**Kimberley Barrera** 5 hr ago

I have acquaintances who have the same story. Even with the loved one there at the bedside they could not prevent Remdesevir and the rest of the covid protocol. Even in a small town in Indiana where they knew their Drs. The Drs. convinced them it was going to be ok. Hospital Protocol.

My brother contracted a bad case of covid and had trouble breathing so his wife took him to the hospital. It took them 6 weeks to kill him. But kill him they did.

He wasn't allowed visitors for 3 weeks and when we finally went to see him the nurse told me they put him on nutrition earlier that day. Wait! What? How can you fight illness without nutrition?

My entire family believes covid is evil and the hospital did all they could to save him. I believe they murdered him.

The death certificate says his name and 'an unvaccinated male'. Gee wonder why.

Can't wait for the truth to come out. People need to know and the murderers need to be tried in a court of law.

How do we know hospitals were incentivized. What is the original source? Anyone?

♡ LIKE    💬 REPLY (1)    ⋮

**Christine Mealer** 3 hr ago

It was on HHS website. I looked it up once. They might have scrubbed it by now. Also incentives were given to doctors if they pushed the jabs. Just found out private insurance companies were reimbursing doctors depending on the percentage of patients they were pressuring to get jabbed. The more they pushed their patients into getting them the more money they got.

Explosive: A freight train of truth and obvious truth. Can anyone escape this festal account? It rings

explosive. A freight train of truth and obvious truth. Can anyone escape this factual account? It rings true, because anyone who has witnessed the torture inflicted on cancer patients deemed "terminal" (often without bringing up expensive tests and options or alternatives to improve life) the resulting use of morphine is used to suppress breathing, to suppress life-response to illness. To suppress. The one I saw first hand was dying, the family brought to her bedside and she would sit upright and almost shriek seemingly disconnected, and we took it as "death", which it was, but it was the morphine. How upsetting it is to see the "cover" of covid to actively kill... how disgusting.

The world will respond. it will be a test of censorship.
